

I support satellite radio - it's the best thing that happened to communications. I am more than willing to pay their monthly fee rather than listen to frequent commercials - which are usually about products I am not interested in and which do not influence my purchase habits! Please do not threaten my right to listen to music and radio channels of my choice!!!! XM Radio offers a valuable service to its members and is invaluable while driving. It keeps us informed of weather and traffic patterns in a timely manner, unlike local radio stations which usually broadcast information too late for the motorist to choose an alternate route.
